Depending on the neurotoxin type these act to cleave small proteins within the nerve cell which are involved in neurotransmitter release. Antibodies are used in assays which detect cleaved but not uncleaved substrate. An assay for botulinum type B uses the present sequence as a substrate. It is VAMP (vesicle- associated membrane protein) isoform-1, residues 60-94. The VAMP peptide can be attached by a C- or N-terminal cysteine to a solid phase

The buforins are useful for treating Botulinum or tetanus intoxication by administering a composition comprising a buforin to the subject prior to the contact with BtxB or tetanus intoxication. Antibodies specific for buforins are useful for detecting buforins by forming immunocomplexes. The buforins have improved circulatory half-life, solubility, resistance to degradation and interaction with the active site of the toxin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises clostridial neurotoxin substrate peptides which can serve as fluorescence resonant energy transfer assay (FRET) or quenched-signal substrates in assays for the proteolytic activities of clostridial neurotoxins. The invention further comprises Clostridium botulinum neurotoxin substrate peptides that can serve as immobilised substrates (i.e. bound to a solid phase) in assays for the proteolytic activities of clostridial neurotoxins. The clostridial (including the Clostridium botulinum) neurotoxin substrate peptides are useful for detecting the presence of clostridial neurotoxins in a sample (e.g. food or an environmental sample). The present amino acid sequence represents a clostridial neurotoxin substrate peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Substrate useful in e.g. an assay clostridial neurotoxin, comprises

Human secreted protesins have activities based on the tissues and cells the genes are expressed in Example of activities include: CC cytostatic; immunosuppressive; nootropic; neuroprotective; antivital; crowdistatic; immunosuppressive; nootropic; neuroprotective; antivities; and cells the polypucleotides and polypeptides are useful for preventing, antipolarastic; and cardiant. The polypucleotides and polypeptides are useful for preventing, crating or ameliorating a medical condition in e.g. humans, mice, crabbits; goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or consoned identification. They are also useful as probes for diagnosing a also porder related to the female reproductive system, particularly breast and ovarian cancer. They are also useful as probes for diagnosing agonists are useful in the gene therapy of breast and ovarian cancer; (b) immune disorders; (c) cardiovascular disorders; (d) wound healing; (e) neurological diseases; and (f) confections diseases such as viral, bacterial, fungal and parasitic infections. AAC74328 to AAC74336 and AAB39401 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                S

Antibodies are used in assays which detect cleaved but not uncleaved substrate. Tetanus toxin cleaves the protein VAMP (vestcle-associated membrane protein) at an identical site to that of botulinum toxin type B (BONT/B). The specificities of the endopeptidase activities of the two toxins however differ in the minimum peptide substrate size required for cleavage. While BONT/B requires peptide substrates of 30-35 residues in length for optimal cleavage, the requirement for tetanus toxin is peptide substrates of 50 residues in length. The present sequence, VAMP isoform-1 residues 33-94, is a suitable substrate for tetanus toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Assay for botulinum or tetanus toxin - by combining test cpd. \mbox{\tt w} substrate which is cleaved by the toxin, and antibody specific cleaved but not uncleaved substrate.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      compliance to pain and a method for identifying a compound that regulates the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polynucleotides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition composition to the polypeptides given in the specification and a pharmaceutical composition and a pharmaceutical composition of polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at frame in in intended in electronic form directly from WIPO at frame in intended in the sequences.

Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, cc derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a cc that increases or decreases the expression of the polymucleotide sequence that is differentially repressed in neuronal tissue of a first animal cc the expression of a polymucleotide sequence the expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a cc polymucleotides, a method for producing a pharmaceutical composition, a perification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition to pain and a pharmaceutical composition composition the polymeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain and apharmaceutical nerve injury (Chung), chronic constriction constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed specification, which is differentially expressed during pain. Note:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      맑

Comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a cc which is differentially regulated in an animal subjected to pain and a cc whit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially cc expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of an expressed in an animal of one or more of the polypeptides given in the capture of the polypeptides given in the composition, a method for identifying a compound useful in treating compound and a pharmaceutical composition comprising the one or more composition and a pharmaceutical composition composition that regulates its activity is useful for preparing a medicament for treating compound (e.g. spinal segmental nerve injury (Chung), chronic constriction contriction constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene contriction) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed of fruity in the specification, but was obtained in electronic form directly from WIPO at the contriction of the printed of the printed of the specification, but was obtained in electronic form directly from WIPO at the contriction of the printed of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence CC which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal cC that is differentially expressed in neuronal tissue of a first animal cC the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal cC expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a cc method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more cC specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more cC polypeptides or their antibodies. The polynucleotide or the compound that cC modulates its activity is useful for preparing a medicament for treating cpain (e.g. spinal segmental nerve injury (Chung), chronic constriction cinjury (CC) and spared nerve injury (SNI) in an animal (e.g. gene charapy). The sequence presented is a human protein (shown in Table 2 of the specification, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a composition is differentially repressed in neuronal tissue of a first animal composition is differentially expressed in neuronal tissue of a first animal composition of a polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of the polynucleotide sequence the expressed in an animal subjected to pain, a method for identifying a compound which regulates compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of an expressed in an animal of one or more of the polypeptides given in the composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more complypeptides or their antibodies. The polynucleotide or the compound that method for identifying a compound useful in treating companies its activity is useful for preparing a medicament for treating pain. Note: The sequence data for this patent did not form part of the printed contraction, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at the specification which is differentially expressed during pain. Note:
                                                                                                                                                                                      Ş
                                                                                                         RESULT 13

ADSTIGNATION TO PART WAY SPAIRS FOR 
                                                                                            The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, comprising the or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a composition the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal composited to pain, a method for identifying an agent the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for pain, a method for identifying a compound that regulates the activity of an animal of one or more of the polynucleotides given in the composition, a method for identifying a pharmaceutical composition, a periodic or make a polynucleotide sequence which is differentially compound that regulates the activity in an animal of one or more of the polypetides given in the composition, a method for identifying a pharmaceutical composition, a periodic or the polypetides or their antibodies. The polynucleotide or the compound that polypetides or their antibodies. The polynucleotide or the compound that one or more composition to more composition of the principle of the pain and a spared nerve injury (CNUM)) in an animal (e.g. gene constriction the sequence data for this patent did not form part of the printed construction 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
